Directors' Report

Overview

Operating earnings (EBITDA) increased from \$35.5m last year to \$43.6m this year with tax paid profit on operating earnings up from \$14.7m last year to \$27.1m this year. Overall profit for the six months totalled \$26.0m, behind the \$35.3m of the previous year that included one-off items (net gain of \$20.6m last year versus an impairment charge (High Liner Foods Inc) of \$1.1m this year). In addition foreign exchange gains improved from a loss of \$2.1m last year to a gain of \$6.5m this year as the New Zealand dollar declined.

Consolidated Interim	6 months ended	6 months ended	12 months ended
Income Statement	31 March 2009	31 March 2008	30 September 2008
	\$000	\$000	\$000
Sales Revenue	228,441	218,103	436,564
EBITDA	43,620	35,498	65,874
Depreciation, amortisation and impairment	(8,000)	(14,143)	(22,359)
Net interest	(4,213)	(5,890)	(10,021)
Net currency exchange gains / (losses)	6,470	(2,051)	5,505
Net gain on sale of investments, property,			
plant and equipment	(32)	27,200	29,749
Operating surplus before taxation	37,845	40,614	68,748
Less taxation	(11,790)	(5,255)	(15,328)
Operating surplus after taxation	26,055	35,359	53,420
Minority interests	(70)	(66)	(76)
Net surplus attributable to shareholders	25,985	35,293	53,344

The increase in underlying earnings for the business resulted from improved contributions from deepwater and aquaculture operations more than offsetting declines in returns from inshore and international fishing. In the early part of the period we benefited from strong market demand and prices coupled with a declining New Zealand dollar. From October that slowed down as international markets reacted to the global financial crisis. While markets are slowly returning to normal there has been a build up in inventory levels for some species while markets find a new equilibrium. Foreign exchange gains were earned in the first three months as the New Zealand dollar declined from record highs. The average US currency conversion rate during the period was US 55.5 cents compared to US 77.2 cents

the previous year. In the early part of the year we commenced taking foreign currency hedges for United States dollars and Japanese yen for approximately 30% of estimated receipts over the next 12 months.

Markets for most of our main species declined during the period. Graphs showing some of the price declines are shown in this report. The three most significant price declines that impacted our results were ling fillets, half-shell mussels and skipjack tuna.

Fuel costs were the same in the first six months of the year as compared with the first half of last year.

Aquaculture sales and profits continued to improve following the significant gains in the second six months last year. However towards the end of the period half-shell mussel prices, particularly in the United States fell by almost 40% from their peak led predominantly by weak selling out of New Zealand. Salmon stocks at the end of the period from last year's harvest were higher than normal but have all been sold since.

The more rigorous testing regime and the progressive upgrade of the critical processing environments in our shellfish plants have meant that we have been able to ship product to market without any of the product recall issues of last year.

Skipjack tuna catches in the Pacific were lower than last year and in New Zealand we had a poor skipjack season at less than half the previous year. Market prices for skipjack tuna also declined over the period reducing returns from this species.

Catches in the deepwater were generally ahead of expectations. Hoki catch rates continue to improve as the resource recovers and early season squid catches have been reasonable. The freezer longliners had another difficult year in the Ross Sea targeting toothfish as total catches by the fleet reached the allowable limit earlier than prior seasons. The San Aspiring has again been approved to catch toothfish in the South Georgia area this year.

2

With results continuing to improve from our investment in Weihai Dong Won Food Company Limited (WDWF) operations in Weihai, China, we recently concluded arrangements to increase our shareholding to 50% and turn the operation into a 50/50 joint venture with Dong Won Fisheries Company Limited of Korea. Volumes being processed continue to improve and the negative perceptional impact on product processed in China is slowly diminishing.

Impairment Charge

In the current period an impairment charge of \$1.1m has been taken to align the value of our investment in High Liner Foods Inc with the market value of those shares as recorded on 31 March 2009.

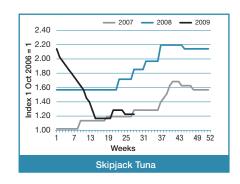

For the comparable period last year we recorded a \$27.2m profit mainly from the disposal of our shares in Fisheries Products International Limited partially offset by various impairment charges totalling \$6.6m.

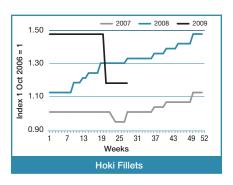

Markets and Pricing

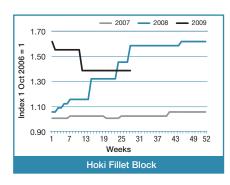

With the international economic crisis seafood prices mostly declined over the first six months of this year but coming off record highs in the previous six months. In most cases the price declines were more than offset by the decline in the New Zealand dollar. As a result net margins for many species were well ahead of last year. Stock levels of some species increased over the six months as a result of banking issues in some markets that made trading difficult and credit control imperative. The selling prices for half-shell mussels in the United States have dropped markedly with a flow on effect in other markets as well. In our view and experience they are now selling for less than the real market potential and are being held down by weak selling out of New Zealand.

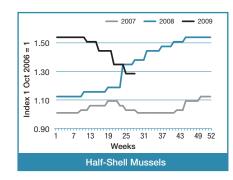

Consistent with past reporting the following species graphs depict the relative movement in selling prices in the market place.

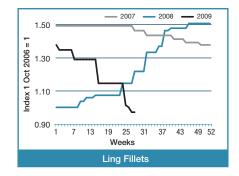

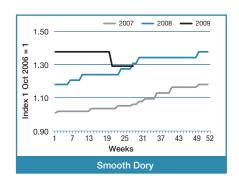

The most dramatic price changes are in ling, half-shell mussels and skipjack tuna with only minimal effect on hoki fillet blocks and smooth dory and price increases in respect of orange roughy.

Inshore Operations

Auckland

Auckland's processing and packing for local supermarkets has continued to grow and is helping to eliminate dependence on reprocessing during the normal seasonal fluctuations associated with inshore fisheries. New processing plant technology installed in January 2009 is already assisting in minimising labour costs. Further investments in technology are planned over the next six months. A slow down in demand for some species is affecting profitability.

Auckland Fish Market

Auction sales declined in the second quarter but have since returned to normal levels and the business is expected to achieve its targeted returns. Demand for Seafood School corporate classes weakened as a result of a more cost conscious trading environment. The Big Picture attraction at the Auckland Fish Market started trading in late December. This joint venture is a wine tasting experience; sales are slowly increasing as awareness grows but are hampered by the difficult trading environment and downturn in tourist numbers.

Tauranga

Poor blue mackerel and skipjack tuna catches have resulted in lower revenue and profitability in Tauranga. New processing technology installed and commissioned over the next six months will increase processing efficiency. The Mount Maunganui-based Export Cold Storage business has performed ahead of expectations reflecting the increasing demand for storage as a result of a slow down in demand for some seafood and other frozen export products.

Timaru

While catches of barracouta have improved, inshore squid catches have been below expectations. The factory continues to benefit from the strong demand and improved prices for orange roughy. The fishmeal plant is performing above expectations due to the steady demand for fish oil and the fishmeal price remains strong.

The San Won coldstore has had a strong last quarter due to the lack of cold storage capacity around the country as a result of the general slow down in demand for some frozen products.

Deepwater Operations

Freezer Trawlers

The 64-metre freezer vessels continue to perform well with continuing improved catch rates in the hoki fishery likely to result in a quota increase later this year. All three trawlers are switching to a heavier grade, lower cost fuel which will result in lower fuel costs during the second half of the year. The orange roughy and oreo dory fisheries on the Chatham Rise continue to produce as expected and are harvested under the "One Fleet" co-operative catching arrangement, which is proving effective.

Freezer Longliners

Ling fishing by the San Aotea II in the early and latter part of the period has been slower than previous years. Unfortunately this vessel and the San Aspiring had lower catches of toothfish in the Ross Sea as the fishery was closed (prematurely) with the total catch reportedly taken. The San Aspiring has moved to the South Georgia area, fishing for toothfish.

Scampi Freezer Vessels

The scampi fleet configuration was changed during the period with the retirement of the two oldest vessels and the acquisition of one newer vessel. Markets remain steady for scampi, with the weaker exchange rate improving returns.

Charter Vessels

The four Korean charter vessels have improved their catching performance this year.

The transition to the new Ministry of Fisheries and Maritime New Zealand requirements for foreign charter vessels has been successfully achieved. Financial returns continue to be steady and in line with expectations.

Quota Trading

Income from quota trading is consistent with previous periods and continues to make a useful contribution to income.

Aquaculture Operations

Aquaculture contributions increased over the previous year. Good market demand and strong prices for mussels in the first quarter and tight control of costs have been the main contributors.

Pacific Oysters - Kaeo

Oyster production was below expectations for the period but we expect to pick up this shortfall in the new season starting June. Market demand and price outlook is steady for the new season production. We will commence harvesting some oysters grown in bags rather than sticks in the coming period; we expect they will produce better quality oysters.

Greenshell™ Mussels - Coromandel, Havelock and Bluff

Production volumes at Coromandel and Bluff are ahead of last year with Havelock behind due to unseasonal rainfall closures and poor mussel condition during the first quarter. All processing plants have been operating two shifts at full capacity. Market prices have been strong in the first quarter but have deteriorated significantly as the

year has progressed which is partly due to the global economic downturn and partly due to industry activity in the market place.

An additional vessel has been purchased to assist with the increased production from our Coromandel farms and we have also invested in new farming technology that will improve the productivity of our farming operations in this region.

Construction of the factory expansion at North Island Mussel Processors (NIMPL) joint venture in Tauranga is now well underway and proceeding to plan with equipment installation due in October and commissioning due to commence in December 2009.

King Salmon - Stewart Island and Bluff

Salmon production levels are close to expectation and well ahead of last year. During the first six months salmon stocks increased as the market has continued to be difficult, with sales volume and price pressures from salmon harvested early in Chile due to disease problems. This situation has now eased and sales and markets are improving, particularly in Asia.

The farm upgrade for the second (Kiwa) site in Big Glory Bay is behind schedule but will be complete and fully operational by the end of May. Performance of the new automated feeding technology on the first (47 South) site is exceeding expectations.

Bluff Oysters

Following on from our purchase of the Jones Group Limited assets the results from our first season in the Bluff oyster fishery are pleasing. The season started on 1 March and catches, quality and market returns have exceeded expectations to date.

International Fishing Operations

Australia

The Australian business had a lower level of sales than anticipated for the six months and this environment looks likely to continue for the balance of the year with all sectors of trading affected. The fresh fish trawler has performed above expectations

and should continue at this level for the rest of the year. A new Melbourne Consignment Market facility is in the final stages of planning and construction will commence in the near future. There have been some changes in quotas made by the Government, with the overall result being a slight reduction in our holdings. Some opportunities for business growth are being pursued.

Pacific Tuna Vessels

The three Pacific tuna vessels made a reasonably positive contribution for the six months and their overall performance was in line with expectations. The operating climate is more challenging in comparison to the first six months of last year with catches being down and prices having declined around 50% since the start of the year. Fuel prices also fell about 50% over the six months which helped to mitigate the price decline and thereby safeguard a creditable contribution. The second six months is likely to see a continued steady performance of the vessels in what is expected to remain a tight operating climate.

Overseas Investments

High Liner Foods Inc (TSX:HLF)

High Liner Foods Inc recently announced significantly improved results for the first three months of this calendar year although in the current difficult financial environment this improvement is not always recognised in equity markets. In the current period an impairment charge of \$1.1m has been taken to align the value of our holding in High Liner shares with the market value of those shares as recorded on 31 March 2009.

Weihai Dong Won Food Company Limited, China (50% owned from 1 May 2009)

With results continuing to improve from our investment in Weihai Dong Won Food Company Limited (WDWF) operations in Weihai, China, we recently concluded arrangements to increase our stake to 50% and turn the operation into a 50/50 joint venture with Dong Won Fisheries Company Limited of Korea. Volumes being processed continue to improve and the negative perceptional impact on product processed in China is slowly diminishing.

Consolidated Balance Sheet

Sanford ratio of shareholders equity in proportion to total assets continues at 76%. The working capital ratio has declined from 2.7:1 at the end of the half last year to 2.1:1 this year mainly as a result of increased inventory levels. Inventory levels are up from \$46.8m a year ago and \$41.4m six months ago to \$55.6m at the end of the period. The increased inventory levels reflect the difficult and uncertain market conditions during the period which have now eased somewhat. Inventory is expected to return to a more normal level by the end of the financial year.

Capital Expenditure

During the period the Jones Group Limited assets (principally quota) were acquired for \$19.3m. In addition capital expenditure for the period totalled \$11m of which \$7m was new technology processing installed in the inshore plants, \$3m on an additional scampi vessel and other deepwater vessel improvements and \$1m on additional aquaculture equipment. Since the end of the period we have purchased a recently built, second hand inshore vessel from the Faroe Islands for \$3m.

Sustainable Development

We continue to drive forward on our sustainable development to underpin our Sustainable Seafood motto. International pressure continues to build from consumers to ensure that the seafood they consume comes from sustainable sources. We fully support the recently announced move to seek Marine Stewardship Certification (MSC) of 5 additional fisheries in New Zealand. The hake, ling and southern blue whiting fisheries are relatively small compared with the hoki fishery but they are none-the-less important whitefish fisheries that will allow us to sell a wider range of MSC certified products. The certification of the Ross Sea toothfish fishery is due to be completed in the near future which will mean that both our Ross Sea and South Georgia toothfish is MSC certified. We continue to direct our charitable support to particular organisations and during the period our Australian subsidiary donated A\$25,000 to the Victoria bushfire appeal.

Outlook for the Second Six Months to 30 September 2009

There is some prospect of international trading conditions in the second-half of the financial year being slightly easier but with the current strength of the New Zealand dollar it is still not possible or indeed wise for Sanford to project a year-end profit result. We continue to have a first rate team in place with a well balanced portfolio of interests in various fisheries. We see those operations continuing throughout the remainder of the year without the need for any downsizing and so our primary focus will be on continuing to build and improve the quality of our assets and operations to achieve future growth. We will continue to seek improved efficiencies in all facets of our business activity through both technological development and continuous and rigorous testing of our business model and continuing our focus on managing our foreign exchange and debt levels to minimise risk and to safeguard the interests of all shareholders.

The accompanying notes form part of these financial statements.

1. Basis of Preparation

These condensed consolidated interim financial statements comply with NZ IAS 34 Interim Financial Reporting. They should be read in conjunction with the financial statements of the Group for the year ended 30 September 2008.

2. Accounting Policies

There have been no changes in accounting policies. All policies have been applied on bases consistent with those used in the previous interim and annual statements. To ensure consistency with current period, comparative figures have been restated where appropriate.

3. Segment Reporting

The Group operates in two geographical areas, being New Zealand and Australia.

The Group has disclosed segmental results only on directly attributable income and expenditure.
